IT'S BETTER YOU KNOW, BEFORE YOU GO

Instructions to get optimal use out of your breathalyzer

- | | |
|--|--|
| <ul style="list-style-type: none">- After consuming alcohol, wait 20 minutes before carrying out a breath test.- Wait 5 minutes after a cigarette- Wash the mouthpiece after each use. | <ul style="list-style-type: none">- Do not leave the device in a car in cold or warm places (store between 10 and 30 °C, ideally).- Do calibrate your device regularly. |
|--|--|

Device calibration

You have just received your breathalyzer, it comes precalibrated. **However, do not forget that it is very important to calibrate your device according to its specifications.** Your breathalyzer requires maintenance to maintain its effectiveness and efficiency to function properly.

Calibration frequency

Generally, it is recommended to check your device every **12 months and/or between 300 and 1000 tests depending on the type of device you own.** For more information, refer to the instruction manual.

Calibration Procedure

By mail

Visit www.DUIprevention.org, on the home page scroll to the bottom and click Terms of Service to find the calibration section and follow the guidelines.

Think Twice, Inc.
P.O. Box 1831
Bellevue, WA 98009-1831

To ensure the delivery and follow-up of your device, we strongly recommend that you obtain confirmation of delivery when shipped.

The cost of calibration when the device is sent by post is \$39.95, including taxes and the cost of transportation within the United States. The cost may be higher if it requires to be sent to the manufacturer.

Your product will be verified, calibrated and shipped usually within 5 business days.
